

Airport solutions

Global key and asset management

Who we are and what we do

Traka is the leading worldwide specialist in key, equipment and asset management solutions, with over 50% of its annual turnover coming from international trade. Our systems are in use 24/7 in many sophisticated and demanding environments, from prisons, police forces and hospitals through to commercial distribution centres and rugged military applications.

Using Traka's 'silver bullet', the iFob, our intelligent solutions enable you to implement superior control, and to ensure Health & Safety compliance – by restricting the use of keys, equipment and facilities, so that only authorised staff can use your valuable assets at any time. This ability to manage, protect and report upon assets more effectively can significantly reduce operating costs, enforce user accountability, improve efficiency and increase productivity – enabling you to quickly realise a return on investment and make significant savings.

Intelligent asset management

Keys for equipment, secure areas and facilities

Vehicle fleets

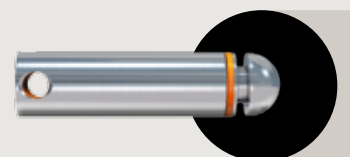

Tools and specialist equipment

Radio handsets

Laptops, PDAs and handheld data terminals

Intelligent asset management for airport environments

Precise control and management of valuable assets is of paramount importance within any fast paced, yet highly secure airport environment. Traka's intelligent solutions enable you to better manage access to your keys, tools, equipment and vehicle fleet – and by integrating with your existing access control systems if required, we can ensure that all assets are returned before your staff leave site.

Key Management

- Control access to site and facility keys, and secure areas, for better security
- Restrict access to specific keys for individual staff and contractors
- Require multi-level authorisation in order to release critical keys
- Report on key usage, identify when keys are taken and returned, and by whom
- Automatically alert and notify when keys are not returned on time

Fleet Management

- Prevent unauthorised staff from driving support and specialist vehicles
- Always know exactly who was driving each vehicle and when
- Report on mileage, fuel, hours used, and even where the vehicle is parked
- Enforce alcohol testing for drivers before their vehicle keys are released
- Vehicle defects reported by the user automatically generate alerts to the service team and can lock-out user access to vehicles with serious faults
- Warn, then lock-out, drivers whose licenses expire

Tool Management

- Control who has access to specialist tool cabinets and equipment
- Audit tool and equipment usage, always know who has used them and when
- Manage the shared use of tools, between staff and contractors, saving on unnecessary duplication and better utilisation
- Create a controlled environment, so personnel are more accountable for the tools that they use
- Set recalibration and service intervals, so tools are properly maintained

Radio Management

- Handsets are securely stored preventing theft or malicious damage
- Radios are available 24/7, to authorised users only
- Users are fully accountable, resulting in fewer losses and less damage
- RFID tagging ensures every radio is uniquely identified and managed
- In-locker battery charging ensures handsets are always ready for use

Asset Management

- Manage and control the use of shared portable equipment more effectively
- Ideal for laptops, data terminals, scanners, cameras and specialist equipment
- Improve shift start-ups by ensuring important equipment is in place and ready to use – minimise staff requirements to supervise and issue resources
- Deposit important paperwork, making it readily available 24/7 to selected staff
- Use our software to manage, control and report on usage, with confidence
