

Rack manager

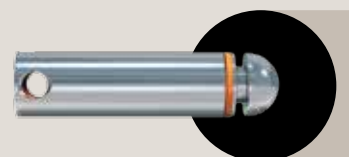

Fully audited access control for data centres

Who's targeting your data?

Traka is the leading worldwide specialist in intelligent key and asset management solutions. We manufacture secure systems that allow you to control and audit who has access to your valuable assets – keeping them out of the wrong hands.

Traka's rack manager is an intelligent solution that allows you to restrict rack access to authorised users only. Furthermore, it allows you to maintain a full audit of who has accessed which rack, and when.

Intelligent rack management from Traka

How easy is it to access your data racks?

Traka's rack manager provides a secure solution to ensuring access is available 24/7 to authorised users only.

Who had access to your data racks?

Rack manager has full audit capabilities and retains a complete history of all user transactions. Reports can be downloaded quickly and easily via a USB port.

How does it work?

The rack manager is fully integrated with your current access control system. The interface to the system is a 7 inch touch sensitive pod, which uses the latest embedded processing technology.

With the rack manager all access to data racks is managed via the touch screen pod. Each authorised user identifies themselves at the pod (via Smart card, biometrics or PIN) and selects the rack they wish to access.

Traka's rack manager module can manage access to 60 racks/120 doors and drives the entrance and exit doors to server rooms with feedback from both doors and two locks.

Key management solutions

- Individual staff recognition ensures unique access permissions
- Automatically alert and notify should a key not be returned on time
- Audit and account for every key bunch 24/7 365 days per year
- Available as a stand alone or networked system
