

Hotels key-in with Traka

Managing keys better and helping to protect your people too!

Many hotels have issues with managing keys – but Traka provides a proven solution to leading hotels that keeps them one step ahead of the competition - both for House Keeping and Security Keys. The security implications if keys, especially Duty Manager (DM) keys or master Ving cards, get lost are serious. Wasted staff time and lost productivity, potential theft of stock and valuables, compromised security for staff and guests, as well as the replacement costs and extra administration time - just some of the many issues likely to be faced.

Traka is established in leading hotels such as Hilton (UK), De Vere Grand, The Lowry, The Dorchester, The Berkeley and even the 7* Atlantis Palms in Dubai.

Traka's range of intelligent Key Management solutions controls who can gain access to keys, restrict individual key usage to authorised users, raise an alarm if a key is not returned on time, alert if a key is not taken, provide a full audit of key activity and generate numerous easy to use management reports.

- Basic cabinet configuration from 20-180 keys – but the system is fully expandable to hold thousands of keys
- Multiple cabinets can be networked, locally or remotely, for large sites to hold keys in different locations
- User profiles and key details are configured in a central database on a standard PC for easy administration

Key

Clever key

Why are Traka solutions used to manage keys in leading hotels? Simple – because keys get put back!

Some hotels want to manage their keys better for security reasons, others want to ensure Health and Safety compliance and Duty of Care in the Workplace. Whatever the reasons, many significantly reduce costs by cutting down on administration time or improving start-up times with DM keys and House Keeping keys always available 24/7.

Traka:- 'it gets keys put back'

Knowing who has a key, knowing who had a key, or knowing who returned a key and when, is powerful information. All transactions are automatically audited using the Traka32 management software, installed on a standard windows PC. It is centrally sited and can be networked to multiple cabinets. Being able to report on missing keys or keys out of the system at any time, either at the cabinet or through the Traka software, helps to ensure that there is an increased sense of ownership, responsibility and user accountability. Traka goes a long way to ensure that keys do actually get 'put back' quickly.

Keys such as:-

- DM key bunches
- Store rooms
- Bar areas
- Conference facilities
- Leisure facilities including gym, swimming pool and sauna
- Meeting rooms
- Lifts and emergency accesses
- Plant and maintenance rooms
- Service areas

A Traka solution provides a proven method of restricting the access of keys to authorised users only and fully auditing key usage. Each key set is permanently tagged and locked inside intelligent software controlled cabinets. This process ensures:

- 🔑 no paperwork
- 🔑 no illegible signatures
- 🔑 auditable reports
- 🔑 no human error
- 🔑 a permanent record of every key taken
- 🔑 instant identification of keys not returned

- Systems configurable giving multi-user access to one or more keys, each with its own parameters
- Unique time access controls for different user groups; for shift patterns, curfew limits or restrictions
- Prevents users gaining unauthorised key access
- Key booking options for advance scheduling of equipment and access to rooms
- Central control for managing key usage, reporting on key usage and utilisation statistics

Shouldn't we be talking?
